01 / Citrix NetScaler: check exposure and investigate compromise

Canadian Centre for Cyber Security · 2026-10-09

WHAT CHANGED
The Canadian Cyber Centre warns of critical vulnerabilities affecting NetScaler ADC and NetScaler Gateway.

WHY IT MATTERS
A remote attacker could execute arbitrary code on a vulnerable appliance without authenticating.

WHAT TO DO
Preserve forensic evidence before rebooting, patching, or rebuilding affected appliances, where feasible.

EXPLOITATION
CISA KEV lists CVE-2026-88771 and CVE-2026-88772. That signal applies to those CVEs, not every related issue.

Not supplied: versions. Check the complete source before acting.

02 / Lantronix: check device versions and apply the matching fix

CISA · 2026-10-08

WHAT CHANGED
CISA warns that successful exploitation could bypass authentication and run code with root-level privileges.

WHO IS AFFECTED
One affected product is EDS5000 through 2.1.0.0R3. Check the complete product table before acting.

WHAT TO DO
For EDS5000, upgrade to 2.2.0.0R1 or later. This fix is specific to that family.

EXPLOITATION
CISA KEV lists CVE-2025-67038. Do not interpret that as exploitation of every vulnerability in this advisory.

03 / FortiMail: match your branch to its fixed release

Fortinet PSIRT · 2026-10-01

WHAT CHANGED

An unauthenticated attacker could write arbitrary files through crafted HTTP or HTTPS requests.

EXPLOITATION

Fortinet reports exploitation in the wild.

WHAT TO DO

Example: FortiMail 8.0.0–8.0.1 should move to 8.0.2 or above. Check the source table for other branches.

WHAT TO DO

The listed workaround is to disable IBE feature support in the GUI. Consult the vendor guidance before changing configuration.
